

## Post surgical treatment

Scientific work presented at the 2nd annual Conference on Aesthetic Medicine, Milan (Italy) Nov 2000. TOPIC: Penile enlargement Phalloplasty and post operative treatment using the **Andropenis®**. R. Vaccari, MD, M. Musillo, MD, Pezzoni, MD. Andrology Medical and Surgical Center, Milan (Italy).

### Surgical Procedures:

#### 1. Pubic liposuction:

Local anesthetic infiltration, pubic liposuction, and fat processing to prevent its reabsorption after penile lipofilling.

#### 2. Release of the pubo-penile ligament:

The ligament is manually detached from the lateral fibers. Complete cut of ligament after careful hemostasis.

#### 3. Wound closure:

This is carried out in layers with puboplasty techniques V-Y which allows the pubic skin to advance towards the base of the penis.

#### 4. Penile lipofilling (body fat injection):

#### 5. Post operative guidelines:

The **Andropenis®** may be used 15 days after operation for a period of 2 months. Being just as important as the surgical stage, with the aim of avoiding serious complications such as penile fibrosis.

**The Andropenis® in time provides a gradual enlargement of penis.**
